

Intro to BigQuery solutions

These are the solutions to the Intro to BigQuery activity. You can refer to this document if you are troubleshooting your own queries. You can also copy and paste these solutions to test them in your own BigQuery console.

1. What is the name of the station whose `start_station_id` is 111?

```
SELECT
    start_station_name
FROM
    `bigquery-public-data.london_bicycles.cycle_hire`
WHERE
    start_station_id = 111;
```

2. Return all of the `rental_ids`, station IDs, and station names that `bike_id` 1710 started from.

```
SELECT
    rental_id,
    start_station_id,
    start_station_name
FROM
    `bigquery-public-data.london_bicycles.cycle_hire`
WHERE
    bike_id = 1710;
```

3. What is the `bike_model` of `bike_id` 58782?

```
SELECT
    bike_model
FROM
    `bigquery-public-data.london_bicycles.cycle_hire`
WHERE
    bike_id = 58782;
```
